

TurboAir[™]

WHEELED COACH TURBOAIR[™] – AUXILIARY AIR FLOW BOOSTER SYSTEM.

TurboAir provides an additional 900 CFM of air flow for your patients and personnel in the patient compartment through a ceiling ducted distribution system. By combining with traditional bulkhead air distribution, it provides the maximum cooling and air flow distribution available. And it's available upon demand when additional air conditioning cooling is required by your medical personnel or patient during transport.

When specifying your next ambulance be sure to contact your Wheeled Coach sales representative for additional details on our TurboAir system and provide your personnel the comfort and protection they deserve.

Wheeled Coach's TurboAir system retains the industry-leading benefits of our Pure Air Filtration System (P.A.F.) to protect your personnel from exposure to airborne particles 0.3 microns (Anthrax, Meningitis, TB) or larger at an efficiency rate of 99.97%.
